

INFORMED CONSENT  
EDUCATIONAL MATERIAL

Dear Parent:

This material includes the most accurate information to date regarding COVID-19 and associated vaccines. Please review in its entirety prior to vaccinating your child(ren).

---

1. The active ingredient in the vaccine your child will receive is a biologically active agent called messenger RNA (mRNA)<sup>1</sup>

- mRNA instructs cells throughout your child's body to replicate spike proteins which is known to have harmful effects on cells, blood vessels, heart, lungs and other organs.<sup>1</sup>

- mRNA and subsequent spike protein is distributed widely throughout the body and is not limited to the injection site.<sup>2</sup>

- There is no clear evidence regarding how long the spike proteins will persist in your child's body.

2. Spike proteins may change your child's DNA. Studies are needed and remain ongoing.<sup>3</sup>

- Spike proteins have been shown in vitro to enter cell nuclei and interrupt DNA repair processes.<sup>3</sup> This could have important implications especially concerning your child's reproductive health

- Scientists have suggested modifications to existing vaccine formulas to avoid this problem<sup>3</sup> but no changes have been made at this time as it would require a reformulation and recertification of vaccines.

3. Clinical necessity for community-wide vaccination of youth has not been established.<sup>14</sup> Open discussion has been thwarted to favor proceeding with widespread vaccination.

- according to international studies there is no significant difference in rates of infection between vaccinated and unvaccinated adults.<sup>567</sup>

- CDC and State Health Department scientists find similar or higher viral load of Covid-19 virus among the vaccinated as compared to the unvaccinated<sup>8</sup>

- Natural immunity confers at least as good or better immunity than vaccine-induced immunity without the risks.<sup>910</sup>

- An analysis of studies in the UK indicates that overall risk of death or severe disease from COVID-19 is very low in kids. Among 12 million or so people under 18 in England between March 2020 and February 2021, [only] 25 were attributable to COVID-19 — a rate of about 2 for every million people in this age range<sup>11</sup>

- Rates of vaccine injury and deaths exceed the total US deaths attributed to COVID-19 since the beginning of the pandemic, more than all other vaccines combined.<sup>12</sup>

4. Further information important for parents to know:

- lipid nanoparticles encapsulate the active mRNA and congregate throughout the body in sites such as ovaries, uterus, testes, spleen, brain intestines, heart, lungs, and other organs. The harmful effects are known to be harmful.<sup>13</sup>

- Clinical trials for vaccine safety and effectiveness lasted for only two months. No long-term studies have been conducted. Trials did not include age group 5 to 11 years old.

- Pharmaceutical companies are exempt from paying for any liability or damages caused by these products despite record profits in connection to the vaccines.
